PROFESSIONAL SUMMARY

Azure-certified Cloud Engineer with experience in designing and automating scalable cloud infrastructure on Microsoft Azure and AWS using Terraform. Proven track record delivering enterprise-grade CI/CD pipelines (Azure DevOps, GitHub Actions), and incident management via ServiceNow. Holds AZ-104 certification.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure, AWS

Infrastructure as a Code: Terraform

CI/CD & DevOps: Azure DevOps, GitHub Actions

Containers: Docker, Docker Hub

Azure Services: Virtual Machines, VNets, Subnets, NSGs, Storage Accounts, Azure Monitor, RBAC

Programming & Scripting: Python, Linux, Bash, Git

Monitoring: Azure Monitor, Alerts, LogicMonitor

ITSM: ServiceNow (Incident, Change, Service Requests)

WORK EXPERIENCE

Cloud Engineer | LTM Ltd, Pune

May 2025 - Present

Client: Carrier Global Corporation

- Designed and deployed Azure infrastructure (VMs, VNets, NSGs, Storage Accounts) using modular Terraform templates, reducing provisioning time and ensuring environment consistency.
- Built and maintained CI/CD pipelines in Azure DevOps with Terraform validation, plan, and apply stages for fully automated, auditable infrastructure deployments.
- Managed Terraform remote state securely in Azure Storage backend with RBAC-enforced access control, eliminating state corruption risks.
- Monitored cloud environments via Azure Monitor and Alerts, proactively identifying anomalies and reducing incident response time.

PROJECTS

Automated Web Application Deployment Pipeline

- Built an end-to-end CI/CD pipeline using GitHub Action and Docker for automated application deployment.
- Automated code integration, Docker image build, and deployment to AWS EC2, reducing manual effort.
- Implemented core DevOps practices including CI/CD, containerization, and deployment automation.

Tools: GitHub Action, Docker, GitHub, Docker Hub, AWS EC2

Azure Infrastructure Automation using Terraform

- Provisioned Azure infrastructure using Terraform Iaas, including VMs, VNets, Subnets, NSGs, and Storage Accounts.
- Implemented RBAC and Managed Identities for secure and controlled access management.
- Developed reusable Terraform modules for scalable and consistent deployments.

Tools: Terraform, Azure VM, VNet, NSG, Storage Account, Resource Group, RBAC, Managed Identity, Azure CLI

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Docker for Beginners - Hands-on DevOps
- Linux Fundamentals – Coursera

EDUCATION

Bachelor of Computer Application (BCA) - 2025

Indira College of Commerce & Science, Pune
